Driven by Quality

THE BRITISH ASSESSMENT BUREAU ISO9001

Elta Automotive Limited are proud to be an **ISO 9001 accredited company**. Commitment to quality flows through everything we do. Our Vision**PRO** range is no exception; all products are designed to deliver original equipment performance combined with outstanding reliability and undergo meticulous testing procedures throughout the manufacturing process and beyond, including:

Light Flux

Light flux, colour temperature and luminous intensity is tested in-house at the Elta Automotive test facility using state-of-the-art Labsphere equipment.

Chromaticity

Coloured bulbs are tested for chromaticity to ensure light falls within required colour range.

Life Testing

All Vision**PRO** bulbs are life tested to ensure longevity and reliability using cutting edge test rigs. Bulbs are cycled on and off and through both filaments for twin filament bulbs to simulate real world usage.

Vibration and Shock

In use, the bulbs will also be subject to vibration and shock and so this is also simulated at the test facility. This is an especially important test for Vision**PRO** heavy duty and long-life bulbs.

Geometric Measurement

In order to produce a perfect beam pattern, Vision**PRO** bulbs are tested for pin point accuracy of all dimensions and filament positions. Tests are conducted using precision shadowgraph projection equipment.

Testing for ECE Regulation 37 Standards

All Elta Vision**PRO** bulbs are "E" Marked where relevant.

"E" marking refers to the ECE Regulation 37 Standards. This specifies acceptable light output, filament geometry, voltage and wattage and the size and shape of the bulbs.

The number after the "E" identifies the country in which approval was granted.

Elta Vision**PRO** Halogen bulbs are "E" Marked in Germany (E1) which is highly regarded for stringent quality standards.

Other bulbs in the Vision**PRO** range are typically "E" marked in the equally highly regards UK (E11) or Netherlands (E4.)

TECH**ASSIST**

The biggest factor affecting a bulbs life span is voltage.

With just a **5% voltage increase,** a bulb will burn **20% brighter** but its **lifespan is reduced by 50%**
