Installation procedure

Each set is individually packaged with color illustrated

			
<p>Install the resistor with 4148 diode, resistor has no positive or negative direction, diode black surrounded by the position is negative.</p>	<p>Install the CR2032 battery shrapnel in the direction shown in the picture above.</p>	<p>Install seat iC, and pay attention to the position of the notch mark.</p>	<p>Install 16 that is, the row, pay attention to the welding humidity should not be too high, welding time should not be</p>
			
<p>When installing the microcontroller, be sure to align it with the notch and fold the microcontroller this inward a little.</p>	<p>Install 9013, 8550, 7550, as shown in the figure above. The installation direction and position must be correct.</p>	<p>Install the tap switch.</p>	<p>Install the 16-pin wiping needle.</p>
			
<p>Press the stitch inward and fold at an Angle, as shown by Tian.</p>	<p>Fold it in at an Angle of about 30 degrees as shown.</p>	<p>The effect of loading the 1602 display onto the bus.</p>	<p>Cut the key number into small pieces.</p>
			
<p>Insert the key number in the middle of the key cap.</p>	<p>Insert the numbered key cap into the key in the corresponding position.</p>	<p>Loaded into a busted battery. Shrapnel is positive. Power-on test.</p>	<p>Please be patient and insert the key into the shell</p>
			
<p>Secure the circuit board with short screws.</p>	<p>Use tweezers to clamp the short screw into the screw hole that holds the display screen if it is not loose, you can also tighten the screw.</p>	<p>Secure the display with four short screws as shown in the picture above.</p>	<p>Secure the bottom cover of the case with four long screws.</p>
