Radio Characteristics

Note: (a) Up to five exceptions are allowed in the Bluetooth V4.0+EDR specification on receiver part..

(b) Measured at $F_0 = 2441\text{MHz}$.

(c) Measured at $f_1-f_2=5\text{MHz}$. Measurement is performed in accordance with Bluetooth RF test RCV/CV/05., i.e., wanted signal at -64dBm

(d) Measured at unbalanced port of balun. Integrated in 100KHz bandwidth and normalised to 1Hz . actual figure is typically below -130dBm/Hz except for peaks -80dBm at 1600MHz , -80dBm in band at 2.4GHz and -80dBm at 3.2GHz

Note: (1) Measurements methods are in accordance with the Bluetooth V4.0+EDR specification.

(2) Up to five exceptions are allowed in the Bluetooth V4.0+EDR specification on receiver part.

(3) Measured at $F_0 = 2405\text{MHz}$, 2441MHz , 2477MHz .
