Installation and application

1、When load changes in the work, the cylinder with abundant output capacity shall be selected;
2、Relative cylinder with high temperature resistance or corrosion resistance shall be chosen under the condition of high temperature or corrosion;
3、Necessary protection measure shall be taken in the environment with larger humidity, much dust or water drops, oil dust and welding dregs;
4、Dirty substances in the pipe must be cleared away before cylinder is connected with pipeline to prevent the entrance of sundries into the cylinder;
5、The medium used by cylinder shall be filtered by the filter core of above 40um;
6、As both of the front cover and piston of the cylinder are short, typically too large stroke can not be selected;
7、Anti-freezing measure shall be adopted under low temperature environment to prevent moisture freezing;
8、The cylinder shall avoid the influence of side load in operation to maintain the normal work of cylinder and extend the service life;
9、If the cylinder is dismantled and stored for a long time, please conduct anti-rust treatment to the surface. Anti-dust jam cap shall be added in air intake and outlet orifices. The front and back cover can not be dismantled, which shall be especially noticed.

Criteria for selection: Cylinder thrust

Unit：Newton (N)

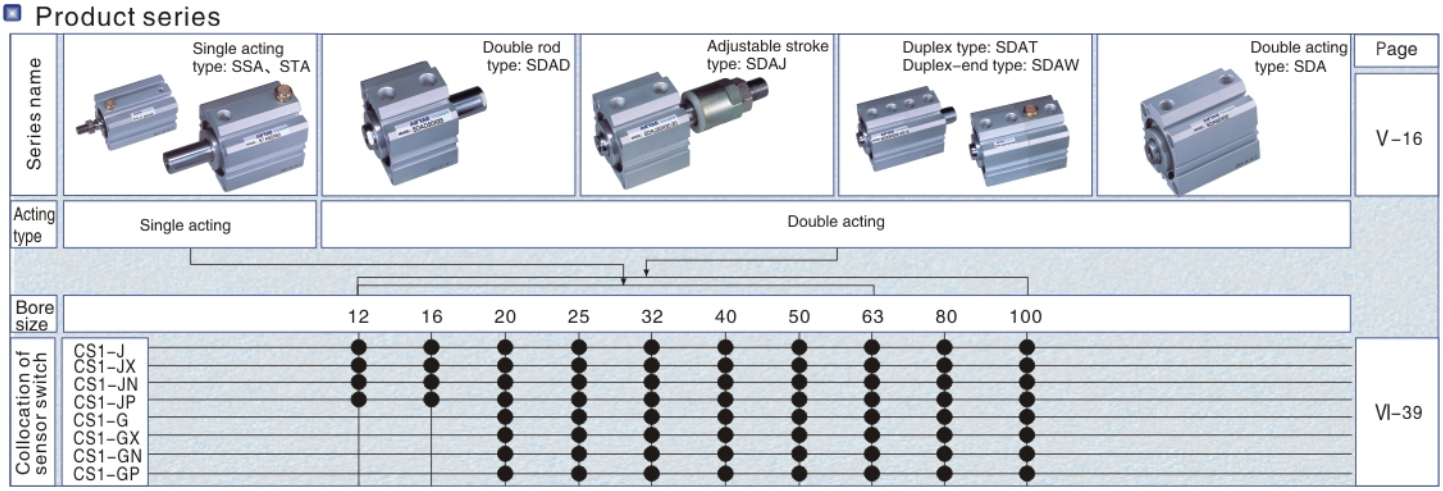
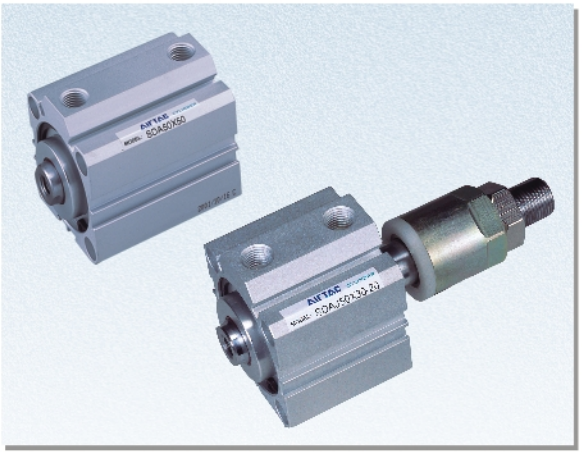
Product series





Specification

Bore size (mm)		12	16	20	25	32	40	50	63	80	100
Acting type		Double acting type									
		Single acting–Push type、Single acting–Pull type								–	
Fluid		Air(to be filtered by 40um filter element)									
Operating pressure	Double acting	0.1~1.0MPa(14~145Psi)									
	Single acting	0.2~1.0MPa(28~145Psi)									
Proof pressure		1.5MPa(215Psi)									
Temperature ℃		–20~80									
Speed range mm/s		Double acting type：30~500 Single acting type：50~500									
Stroke tolerance		$^{+1.0}_{0}$									
Cushion type		Bumper									
Port size ①		M5 × 0.8				1/8"		1/4"		3/8"	

① PT thread、NPT thread and G thread are available;
Add：Refer to PVI–39~VI–50 for detail of sensor switch.

Stroke

Note：1、Within allowable stroke scope, when the stroke is larger than the maximum value, it shall be treated as non–standard one. Please contact the company for other special strokes.
2、The non–standard stroke within the scope of maximum stroke is transformed according to the standard stroke of the upper grade and its shape and dimension are equal to that of standard stroke cylinder of the upper grade. For instance, the non–standard stroke cylinder whose stroke is 23 is transformed from the standard cylinder whose standard stroke is 25, and their shape and dimension are the same.

SDAW SDAW–S

Product feature

1、Manufactured by our enterprise;
2、Riveted structure is adopted to connect the cylinder body and back cover, and piston and piston rod to make it compact and reliable;
3、The inner diameter of the body is treated with rolling followed by the treatment of hard anodizing, forming an excellent abrasion resistance and durability;
4、The seal of piston adopts heterogeneous two–way seal structure. It has compact dimension and the function of oil reservation;
5、Compact structure can effectively save installation space;
6、There are magnetic switch slots around the cylinder body, which is convenient to install sensor switch;
7、Mounting accessories with various specifications are optional.
